

# **Environmental Product Declaration**

In accordance with ISO 14025 and EN 15804:2012+A2:2019/AC:2021 for:

# **Optima Smart**

from izocam Tic. ve San. A.Ş

**Programme:** The International EPD<sup>®</sup> System

Programme Operator: EPD International AB

EPD Registration Number: EPD-IES-0016023

Publication Date: 2024-08-12

Validity Date: 2029-08-11

Geographical Scope: Global

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

The EPD owner has the sole ownership. liability. and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

### How to Read This EPD?

An Environmental Product Declaration (EPD) is an ISO Type III Environmental Declaration based on ISO 14025 standard. An EPD transparently reports the environmental performance of products or services from a lifecycle perspective. The preparation of an EPD includes different stages, from acquiring raw materials to the end of life of the final product/service. EPDs are based on international standards and consider the entire value chain. Additionally, EPD is a third-party verified document. This EPD includes several sections described below.

#### 1. General and Program Information

The first part of an EPD has information about the name of the manufacturer and product/service and other general information such as the validity and expiration dates of the document, the name of the program operator, geographical scope, etc. The second page states the standards followed and gives information about the program operator, third-party verifier, etc. The followed Product Category Rule (PCR) is indicated on the second page.

#### 2. Company and Product/Service Information

Information about the company and the investigated product is given in this section. It summarizes the characteristics of the product provided by the manufacturer. It also includes information about the product such as product composition and packaging.

#### 3. LCA Information

LCA information is one of the most important parts of the EPD as it describes the functional/ declared unit, time representativeness of the study, database(s) and LCA software, along with system boundaries.

The table presented in this part has columns for each stage in the life cycle. The considered stages are marked 'X' whereas the ones that are not declared are labeled as 'ND'. Not all EPDs consider the full life cycle assessment for a product's entire life stages. The 'System Boundary' page is also the place where one can find detailed information about the stages and the assumptions made.

#### 4. LCA Results

The results of the Life Cycle Assessment analysis are presented in table format. The first column in each table indicates the name of the impact category and their measurement units are presented in the second column. These tables show an amount at each life cycle stage to see the impact of different indicators on different stages. Each impact can be understood as what is released through the production of the declared unit of the material—in this case, 1 m<sup>2</sup> glass wool blanket production. The benefits of reuse/recycling of the declared product is reflected in this section.

The first impact in the table is global warming potential (GWP), which shows how much  $CO_2$  is released at each stage. Other impacts include eutrophication potential, acidification potential, ozone layer depletion, land use related impacts, etc. The second table provides results for resource use and the third table is about the waste produced during the production. The fourth and final table shows the results for the GWP-GHG indicator, which is almost equivalent to the GWP-Total indicator mentioned previously. The only difference is that this indicator excludes the biogenic carbon content by following a certain methodology.

### **Programme Information**

The International EPD<sup>®</sup> System: EPD International AB Box 210 60 SE-100 31 Stockholm, Sweden, info@environdec.com

PCR 2019:14 Construction products, version 1.3.3., Construction EN 15804:2012+A2:2019/ AC:2021 Sustainability of Construction Works and c-PCR-005 Thermal Insulation products (EN 16783) Version: 2019-12-20

Technical Committee of the International EPD<sup>®</sup> System. Review chair: Claudia A. Peña, University of Concepción, Chile.

The review panel may be contacted via the Secretariat www.environdec.com/contact.

Independent third-party verification of the declaration and data. according to ISO 14025:2006:

EPD process certification EPD verification X

Independent third-party verification of the declaration and data, according to ISO 14025:2006, via EPD verification by individual verifier

Third party individual verifier: Stephen Forson, Vridis Pride

Approved by: The International EPD® System Technical Committee supported by the Secretariat

Procedure for follow-up of data during EPD validity involves third party verifier:

Yes

No X

### Life Cycle Assessment (LCA)

LCA accountability: Metsims Sustainability Consulting

EPDs within the same product category but registered in different EPD programmes may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cutoff rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison.

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

### **About the Company**

**Owner of the EPD:** Izocam Tic. ve San. A.S. **Production Plant:** Tarsus/Mersin, Türkiye

Izocam is the leading company in its sector that designs, produces and distributes insulation materials for the creation and installation of thermal insulation, noise control, acoustic comfort and fire safety systems in the fields of construction, industry and durable consumer goods. Izocam has more than half a century of experience in Turkey and the Region. Izocam is the first and only company in the world that produces 7 main different product ranges, i.e., glass wool, stone wool, foamboard-xps, izopor-eps, izocamflex-rubber, peflex-polyethylene, polyurethane, under one roof in order to provide energy saving and living comfort.

Izocam has products bearing the CE marking according to the Construction Materials Directive (89/106/EEC) and zocam Glass Wool and Stone Wool products certified by EUCEB (European Cetification Board for mineral wool products).

-Izocam, which serves as the industry leader with a product range of 7 different products in the world and in Turkey, develops solutions to the needs of the industry in cooperation with its group companies, Rigips and Weber.

The company have Quality Management System - ISO 9001, Occupational Health and Management System - ISO 45001, Energy Management System - ISO 500001 and Environmental Management System - ISO 14001.

### **About the Product**

Optima Smart, which is developed for use in light partition wall systems in buildings, inner insulation of external walls, partitions and adjacent walls, walls adjacent to stairwells and elevator shafts, provide fire safety with continuous sound insulation and thermal insulation in the areas where it is applied.

#### **Application Area**

- 'U' channels should be used for the head and base of the partition. In order to fix the channels, marking is made along the ceiling and floor, leaving a 1-2 cm gap from the side wall.
- The channel is fixed to the ceiling and floor at 40 60 cm intervals along the marked line as specified in the project.
- Self-adhesive rubber tape is applied to the surface of the channel to prevent a sound bridge.
- Vertically placed stud dimension is measured, and the partition wall frame is formed by mounting the studs inside the channels.
- If no dimensions are specified in the project, then the stud is fixed to the side wall at intervals of 40 cm 60 cm.
- After the assembly of the initial stud is completed, the studs are placed back-to-back on the horizontal axis into the channel on the ceiling and floor at 40 60 cm intervals if no dimensions are specified in the project, and leveled.
- Studs and channels forming the perimeter should be tightly butted together with clamping scissors.
- The gypsum boards are screwed vertically to the studs at a distance of 60 to 80 cm or at intervals specified in the project, thus completing the wall assembly.
- Self-adhesive plaster mesh is cladded on the joint sections of the gypsum boards. After applying plaster, surfaces can be painted as desired.

The product UN CPC code is 37990 according to Central Product Classification (CPC) Version 2.1. (37990: 37990: Non-metallic mineral products (including mineral wool, expanded mineral materials, worked mica, articles of mica, non-electrical articles of graphite or other carbon and articles of peat).

#### \* Literature value

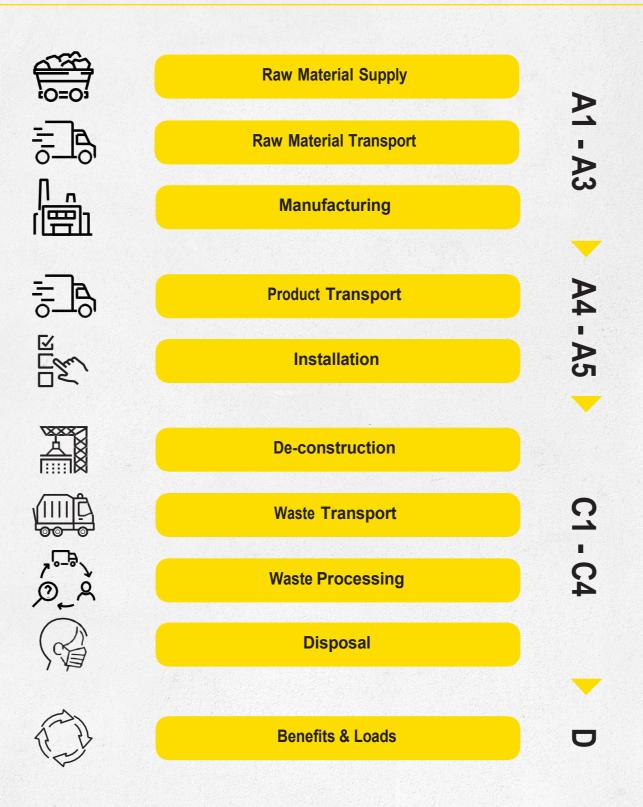

\*T1: 5 or -5% is allowed. The biggest value is chosen at minus tolerance, the smallest value is chosen at plus tolerance.

" The values were measured at TUBITAK (Scientific and Technological Research Council of Türkiye) National Metrology Institute.

For more information about the product, please visit here.

### **System Boundaries & Description**

#### A1 - Raw Material Supply

Production starts with raw materials mainly locally sourced, but some transported from other parts of the world. 'Raw material supply' includes raw material extraction and pre-treatment processes before production. The stage covers the supply (quarrying) and production of all components and additives. The use of electricity, fuel and auxiliary materials in production is also taken into account.

#### A2 - Raw Material Transport

Raw material transport from supplier to manufacturer is considered in raw material supply stage. The distances and routes are calculated accordingly. Depending the manufacturer, locally supplied raw materials are transported via trucks and other supplies come through seaway.

Transport Mode	Туре
Road	Vehicle: Lorry Size Class: >32 metric ton Emission Standard: EURO5 Fuel Type: Diesel
Sea	Vehicle: Container Ship DWT (Load Capacity): 43000 tonnes Fuel Type: Heavy Fuel Oil

#### A3 - Manufacturing

The production process of glass wool blanket involves melting raw materials, predominantly silica sand, along with other recycled glass and minerals, at high temperatures to form molten glass. This molten glass is then fiberized by being spun or blown through a high-speed spinner, which disperses the liquid glass into fine fibers. These fibers are coated with a binder, which helps in binding them together when they are collected and formed into a blanket. The coated fibers are then cured in an oven at a controlled temperature to harden the binder, resulting in a flexible, resilient glass wool blanket. After curing, the blankets are cut to size, packaged, and prepared for distribution. Electric and natural gas are consumed during the manufacturing.

Information	Description
Electricity Data	Türkiye electricity grid mix from Ecoinvent, Medium Voltage
Type of dataset	Cradle to gate
GWP of Electricity Data	0,578 kg CO₂ eq./kWh

#### A4 - Product Transport

Product transport from manufacturer to customer is considered in product material supply stage. The distances and routes are calculated accordingly. Depending the customer location, product is transported via trucks and other supplies come through seaway.

Transport Mode	Туре
Road	Vehicle: Lorry Size Class: >32 metric ton Emission Standard: EURO5 Fuel Type: Diesel
	Vehicle: Container Ship DWT (Load Capacity): 43000 tonnes Fuel Type: Heavy Fuel Oil

#### A5 - Installation

No material or energy use was taken into account for the installation. Mounting equipment is included in the product. Installation can be done by manpower. Additionally, disposal of packaging is taken into account at this stage. The end-of-life scenario of the package was modelled according to EU statistics. It is assumed that 27.5% of the plastics are recycled. Materials other than not recycled, assumed to be incinerated or landfilled.

#### C1 - Deconstruction / Demolition

There is no energy use during uninstallation, manpower and some tools are sufficient.

#### C2 - Waste Transport

Waste transport includes the transport of materials after they reach their end-of-life. The average distance was assumed 50 km by truck from demolition site to a waste or recycling area.

Parameter	Value
Vehicle Type	Vehicle: Lorry Size Class: 16-32 metric ton Emission Standard: EURO4 Fuel Type: Diesel
Distance	50 km

#### C3 - Waste Processing

The product is considered to be landfilled without reuse, recovery or recycling. It is classified as 'nonhazardous waste' in the European list of waste products. The impacts of any treatment process to the demolished waste is included in this stage. It is assumed that no treatment is needed as 100 % of the material goes to a landfill.

#### C4 - Disposal

All plasters end up at construction and demolition waste landfills as their final fate and modelled as such in the LCA.

#### **D** - Benefits

No potential benefits of recycling and re-use were taken into account. Only the benefit due to the recycling of the packaging has been calculated.

## **LCA Information**

**Declared Unit:** The declared unit is 1m<sup>2</sup> of glass wool roof blanket with a R value of 1,35 m<sup>2</sup>K/W (for a thickness of 50 mm and a declared lambda of 0.037 W/mK).

**Conversion Factor:** Weight of 1 m<sup>2</sup> product is 0,7 kg. A mass conversion factor of 1,42 should be used.

Time Representativeness: 2023 (12 months)

Database(s) and LCA Software: Ecoinvent 3.9.1 and SimaPro 9.5

System Boundaries: Cradle to gate with options, module C1- C4, module D and optional modules

(X:Included in LCA, ND: Not Declared)

#### **Geographical Scope**

The geographical scope of this EPD is global.

#### Allocation

Source of raw material, water consumption, energy consumption and raw material transportation were weighted according to 2023 production figures. In addition, hazardous and non-hazardous waste amounts were also allocated from the 2023 total waste generation.

#### **Cut-Off Criteria**

1% cut-off is applied in LCA. Data for elementary flows to and from the product system contributing to a minimum of 99% of the declared environmental impacts have been included.

#### **Reach Regulation**

No substances included in the Candidate List of Substances of Very High Concern for authorization under the REACH regulations are present in this product either above the threshold for registration with the European Chemicals Agency or above 0.1% (wt/wt).

#### **Product Composition**

Product Component	Weight, %	Post-consumer material, weight-%	Biogenic material, weight-% and kg C/kg
External Cullet	70-80	70-80	0
Minerals	10-20	0	0
Additivies	0-5	0	0

#### **Packaging Composition**

Glass wool roof blankets are packaged and send to customer. PE films are generally used in packaging.

Product Component	Weight, kg	Weight-% (versus the product)	Biogenic material, weight-% and kg C/kg
PE Film	0,045	6,4%	0

#### Lca Modelling, Calculation And Data Quality

The results of the LCA with the indicators as per EPD requirement are given in the LCA result tables. All energy calculations were obtained using Cumulative Energy Demand (LHV) methodology, while fresh water use is calculated with selected inventory flows in SimaPro according to the PCR. There are no co-product allocations within the LCA study underlying this EPD. The regional energy datasets were used for all energy calculations. For LCA modelling and calculation, ecoinvent database (v3.9.1) and SimaPro (v9.5) LCA software were used. Characterization factors of EN 15804 reference package based on EF 3.1 are utilized. Impact of infrastructure and capital goods are excluded from the analysis.

Stage	Data Type						
Raw Material Supply	Generic database, plant spesific data						
Raw Material Transport	Generic database, plant spesific data

### **LCA Results**

It is discouraging the use of the results of modules A1-A3 without considering the results of module C. The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks.

Legend HWD: Hazardous waste disposed, NHWD: Non-hazardous waste disposed, RWD: Radioactive waste disposed, CRU: Components for reuse, MFR: Material for recycling, MER: Materials for energy recovery, EE (Electrical): Exported energy electrical, EE (Thermal): Exported energy, Thermal.

Legend

### Interpretation

#### Interpretation Of All LCA Stages

When the environmental impact categories of the product are evaluated, the production stages (A1-A3) seem more dominant than other life cycle stages. The most dominant phase is the production stage for all categories. The use of exturnel cullet, etibor and feldspar during the production stage is the reason for the prominent impacts here. The table below lists the share of life cycle stages in each impact category. Impact category of GWP-biogenic and D module are not included in the percentage display because they contain negative values

Para	meter	A1-A3	A4	A5	C1	C2	C3	C4
Global Warming Potential	Fossil	100%	0%	0%	0%	0%	0%	0%
	Biogenic			I	1		I	I
	Luluc	95%	2%	2%	0%	0%	0%	0%
	Total	95%	2%	2%	0%	0%	0%	0%
ODP		98%	2%	0%	0%	0%	0%	0%
AP		98%	2%	0%	0%	0%	0%	0%
EP - Frest	nwater	100%	0%	0%	0%	0%	0%	0%
EP - Marir	ne	95%	3%	1%	0%	0%	0%	0%
EP - Terre	estrial	96%	4%	0%	0%	0%	0%	0%

**Environmental Impact Distribution by LCA Stages** 

## **Additional Information**

Conversion to mass and to specific thicknesses

All the results of this EPD<sup>®</sup> refer to the reference thickness of 50 mm with a value of R=1,35 K.m2.W-1.

The product can be blown in various thicknesses. To convert the results of all indicators of all modules to other thicknesses, the results expressed in this EPD must be multiplied by its corresponding conversion factor in the table below. Conversion factors of thicknesses not listed below can be calculated as product thickness (mm) / 50 (mm) as they scale linearly.

Pro	Conversion Factor		
Thickness (mm)	Thermal insulation (m <sup>2</sup> K/W)	All indicators	
40	1,08	0,8	
50	1,35	-	
60	1,62	1,2	
70	1,89	1,4	
75	2	1,5	
80	2,16	1,6	
100	2,70	2
